

IN THE CLAIMS

1-9. (Canceled)

10. (Previously Presented) A kit for treating symptoms associated with multiple sclerosis comprising:

human growth hormone; and

at least one of the supplemental hormones selected from the group consisting of sex hormone, melatonin hormone, adrenal hormone, thyroid hormone, and thymus hormone,

wherein the human growth hormone and the at least one of the supplemental hormones is present in an effective amount and in an administerable form for establishing a regimen for replenishment of the human growth hormone and the at least one supplemental hormone within a body to physiological levels.

11. (Previously Presented) The kit of claim 10, wherein the amount of human growth hormone is provided in intravenous unit form in doses of up to 0.5 mg per day.

12. (Original) The kit of claim 11, wherein the amount of human growth hormone is administered twice daily.

13. (Original) The kit of claim 10, wherein the sex hormone comprises at least one of testosterone, progesterone, and estrogen.

14. (Previously Presented) A kit for treating symptoms associated with multiple sclerosis comprising:

human growth hormone; and

at least one supplemental hormone selected from the group consisting of sex hormone, melatonin hormone, adrenal hormone, thyroid hormone, and thymus hormone,

wherein the human growth hormone and the at least one of the supplemental hormones is present in an effective amount and in an administerable form for establishing a regimen for replenishment of the human growth hormone and the at least one supplemental hormone within a body to physiological levels associated with the second or third decades of an average human subject.

15. (Previously Presented) The kit of claim 14, wherein the amount of human growth hormone is provided in intravenous unit form in doses of up to 0.5 mg per day.

16. (Original) The kit of claim 15, wherein the amount of human growth hormone is administered twice daily.

17. (Original) The kit of claim 14, wherein the sex hormone comprises at least one of testosterone, progesterone, and estrogen.

18. (New) A kit for treating symptoms associated with multiple sclerosis comprising:

human growth hormone; and

pregnenolone in doses between approximately 100 and 200 mg per day,

wherein the human growth hormone and the pregnenolone are present in an effective amount and in an administerable form for establishing a regimen for replenishment of the human growth hormone and the pregnenolone within a body to physiological levels.
